

Berm Accessories

[Repair Kits for Pillow Tanks](#) consist of a patch of fabric, that matches the berm it is needed for, scissors, an adhesive, a roller and sand paper. Instructions will also be provided for proper education on how to repair the tank.

The kits are made for small leaks in the berm. It's best to keep on hand for any emergency that may occur from an unexpected leak. They are easy to use and include everything needed to repair the leak.

Products that use the repair are:

- Aluminum angle and foam wall berms
- Any Flexible tank (including the onion tank)
- Frame tanks
- Ground Cloth

Repair Kits

[Flat liners or Ground tarps](#) are made to go under berm and provide protection from the ground its set on. All Berms are recommended to have one of these tarps under it and the when used will expand the life of the berm. These tarps are also used as secondary containment for tanks. Residentially they have been used under above ground pools and underlining for tents.

The flat liners are made from either coated PVC or vinyl. The size and weight of the liner are completely customizable. The weight options are 10 oz., 18 oz., 22oz., and 30 oz.

[Fittings](#) are available in a range of type, sizes, and material for almost all products. A variety of bulkhead fittings, welded half and full coupled, needle type, ball valves, gauges, drum type, adapters, manways and many others can be bought. Materials used to make these include PVC, PP, CPVP, and PE.

Berm Accessories

Tread guards for berms

[Tread guards for berms](#) are to be used with any berm that can be driven through. Their purpose is to protect the berm from the traction of a vehicle. They are to be laid across the berm, extending over the sides, the vehicle should then be driven directly over the guards. Doing so can expand the life of the berm.

Tread Guards work best with the Drive through berm and the foam and air wall berm.

The [Geo Pads](#) are made to go under berm and provide protection from the ground its set on. They protect from abrasion like the ground tarps, and can also be used in addition to. Geo pads can not only go under but above the berm and will provide it with some heat protection.

Geo pads are made of 8 oz. nonwoven geotextile and are available in custom sizes.

Tread guards for berms

Carrying cases for all types of berms are also available for purchase, upon request.
